--	--

1. Overview

This app allows you to request further information from your customers during the registration process. After registration, this information can be edited by the customer in his account and can also be viewed by you in the administration.

2. Installation

Install the app in the Shopware 6 Administration via the tab:

```
|-- Administration
    |-- Settings
        |-- System
            |-- Apps
```

3. Using the App

After the successful installation you will find a new menu item "Advanced registration fields" under "Settings" -> "Apps". There you can assign new groups and fields to the registration.

4. Groups

4.1. Standard

The standard registration consists of the groups "I'm a new customer" and "Your address".

4.2. Adding Groups

In the group overview you can now add more groups. The following values can be specified when creating new groups:

Name*	The technical name of the group. Is not displayed in the frontend.
Label*	The label of the group. Is displayed in the storefront as group label, such as "I am a new customer".
Position	The position of the group to define an order in case of several groups.
Activ	If active is selected, the group is displayed in the storefront. Otherwise the group is not included.
Description	The description of the group. Is displayed in the storefront under the label.

* Required field

Once the group has been created, it is displayed in the front end as follows:

Body measurements
Please enter your body measurements and type of sport here so that we can offer you optimally tailored clothing.

Shoe size	① chest circumference
<input type="text" value="Enter Shoe size..."/>	<input type="text" value="Enter chest circumference..."/>
Sport	
<input type="text" value="Enter Sport..."/>	

Display of the group in the frontend

5. Fields

Once you have saved a group, you can create fields within this group to request additional information during registration. The following types of fields can be created:

Text	Ein simple Textfeld.
Textarea	Ein larger Textfeld.
Number	A field in which only numbers can be entered.
Select	A selection field for which you can define the options yourself.
Checkbox	A checkbox that can be ticked.

Zusätzlich können Sie beim Anlegen neuer Felder folgende Werte definieren:

Name*	The technical name of the field. Is not displayed in the frontend.
Label*	The label of the field. Is displayed in the storefront above the field.
Type*	The type of the field.
Position	The position at the field to define a sequence in case of several fields.
Activ	If active is selected, the field is displayed in the storefront. Otherwise the field is not included.
Required Field	If the field is a mandatory field, the registration cannot be completed if the field is not filled.
Description	The description of the field. Is displayed in the storefront below the field.
Error Message	The error message displayed in the storefront if an invalid value is entered in the field.
Limit field length	If you activate this option, you can limit the field length up and down.
Channel assignment	The channels in which the field should be displayed.

Select Options

Here you can set the options for selection fields with a label and a value.

*Required Field

6. Display in the account

After a customer has registered, his stored data is displayed in the storefront in his account overview.

Default billing address

Max Mustermann
Musterstraße 123
12345 Musterstadt
Germany

[Change billing address](#)

Default shipping address

Equal to billing address

[Change shipping address](#)

Body measurements

Shoe size: 42

chest circumference: 120

Sport: Tennis

[Change Body measurements](#)

Display of groups in customer account

With a click on "Change {group-name}" the data can be changed by the customer himself. Individual groups are displayed separately.

In addition, a link is created in the sidebar for each group, via which customers can change the data of the respective group.

7. Use of Data

7.1. Display in the Backend

You can easily view the data stored by the customer in the administration. Just open a customer via the normal customer module, all created fields are displayed in the custom fields under in the tab "Additional Registration Data".

The screenshot shows the administration interface for a customer named Mrs. Max Mustermann. At the top right, there is an 'Edit' button. Below the customer name, there are four tabs: 'General', 'Addresses', 'Orders', and 'Additional Registration Data'. The 'Additional Registration Data' tab is selected. Under the heading 'Körpermaße', there are three input fields: 'Sportart' containing 'Tennis', 'Brustumfang' containing '120', and 'Schuhgröße' containing '42'.

Administration->Customer->Details

7.2. Display in the Frontend

If you want to use a value in the frontend, you can use it via the variable `context.customer`. The value is accessed as follows:

```
{{
context.customer.customFields.Rhiem_Additional_Registration_Fields_Personal [„field-id“] }}

```

7.3. Using the logic

If you want to use the values in your own logic, you can simply access the table customer. In the cusomt_fields column, all fields are stored with their ID and the respective user value under the entry Rhiem_Additional_Registration_Fields_Personal.

7.4. Display in email templates

In e-mail templates, access to the additional fields is similar to the display in the frontend. The access from the customer is identical. For example, the access looks like this in the order confirmation:

```
{{order.orderCustomer.customer.customFields.Rhiem_Additional_Registra  
tion_Fields_Personal[„field-id"]}}
```

8. Support

You have questions or wish to customize this app to your needs?

Please use the **Shopware-App-Support Function**.
