2 Overview

This plugin makes it possible to provide additional information in the e-mail templates and to use it in your own e-mail texts.

The additional information can be selected in a new menu item in the backend for each e-mail template.

Please note that due to technical limitations, not all e-mail templates can be extended, since certain information must already be present in the e-mail template to be able to extend from them.

Currently the following e-mail templates can be extended:

- sREGISTERCONFIRMATION
- sARTICLEAVAILABLE
- sBIRTHDAY

3 Installation

Install the plugin using the Plugin Manager and enter the license key (details on the Plugin Manager can be found in the Shopware Wiki at <https://docs.shopware.com/en/shopware-5-en/plugins/plugin-license-manager>).

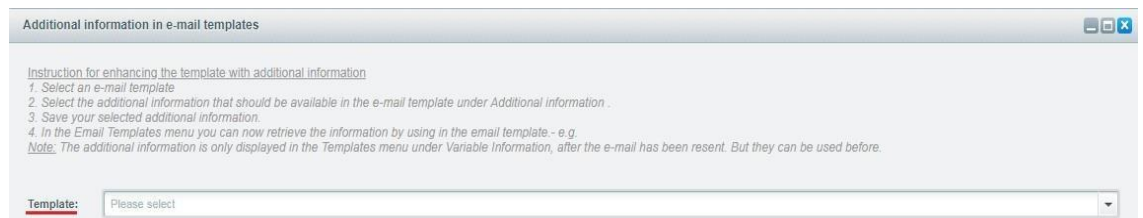

There is no need to configure the plugin in the Plugin Manager.

4 Using the p lugin

4.1 Selecting the e - mail template

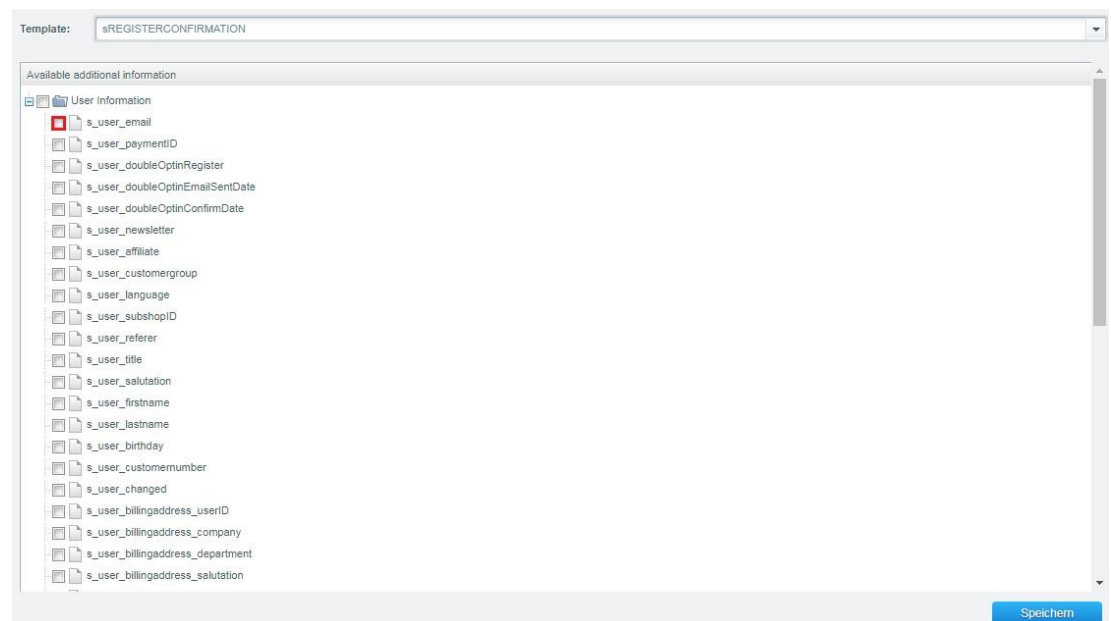

First open the "Settings" menu and click on "Additional information in e-mails", this opens the new menu for selecting the additional information.

Select the e-mail template to which you want to add additional information:

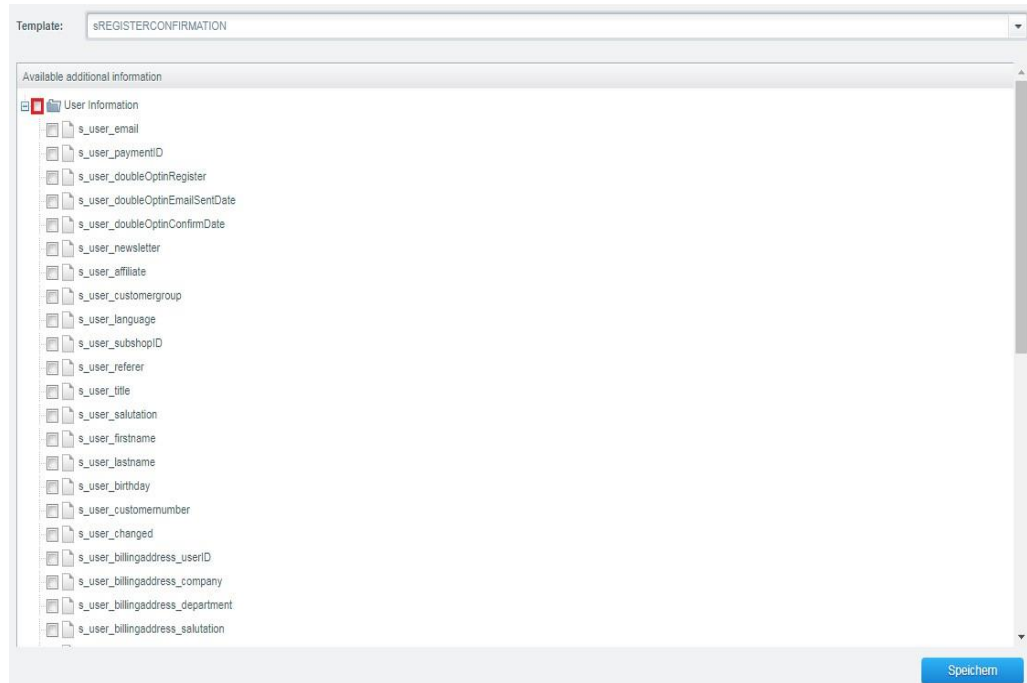

4.2 Selection of additional information

After the e-mail template has been selected, you have the option to select additional information. By checking the checkbox in front of the name of the information, it will be made available for the e-mail template.

If you want to have all the information available for an email template, you can check the checkbox next to the folder icon to add all the information from the folder to the email template.

4.3 Saving the selected information

When you have selected all the information you want, click on the "Save" button to make the data available for the e-mail template.

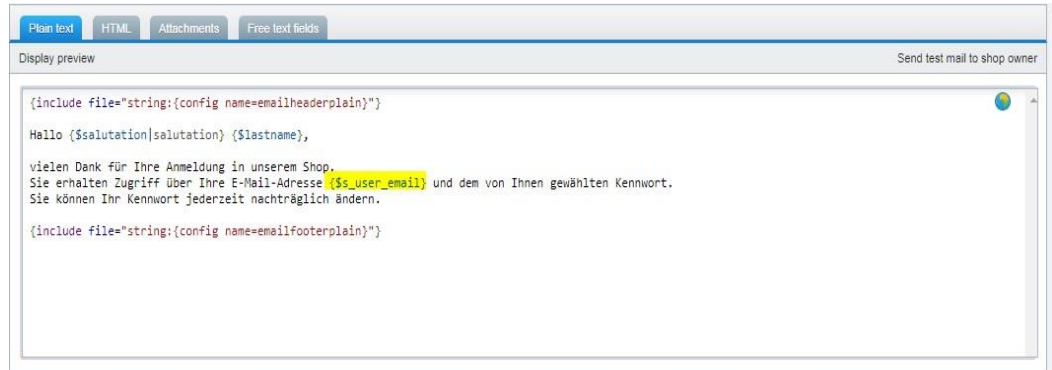

CAUTION: If the e-mail template is changed before it is saved, the selected information will not be applied to the e-mail template.

4.4 Use of the information

After you have selected and saved your desired information, you can open the Shopware own e-mail templates menu. There you can select the e-mail template you

want to edit. The information can be used by using { $\$$ name_of_information} in the template e.g.: { $\$$ s_user_email}.

```
{include file="string:(config name=emailheaderplain)"}
Hallo { $\$$ salutation|salutation} { $\$$ lastname},

vielen Dank für Ihre Anmeldung in unserem Shop.
Sie erhalten Zugriff über Ihre E-Mail-Adresse { $\$$ s_user_email} und dem von Ihnen gewählten Kennwort.
Sie können Ihr Kennwort jederzeit nachträglich ändern.

{include file="string:(config name=emailfooterplain)"}
Send test mail to shop owner
```

Note: The Information variables on the right side of the Email Templates menu do not update until the selected email is resent. The new information will only be displayed after the mail has been sent for the first time. This can also be done without using the new information.

5 Support

Do you have any questions or would you like to customize this plugin to your needs?

Please use the [Shopware-Plugin-Support function](#).

You need support in implementing your shopware requirements? Please use our contact form under <http://rhiem.com/de/kontakt/>
